**IMPORT SOIL EVALUATION
USE OF SOIL SOURCES F AND G AS IMPORT TO PARCEL C**

Re: Import Soil Evaluation, Use of Soil Sources F and G as Import to Parcel C, Boeing Realty Corporation, Former C-6 Facility – Parcel C, Los Angeles, California

Haley & Aldrich, Inc. is herein providing this technical memorandum to summarize our recommendations regarding use of two identified potential import soil sources, herein referred to as Sources F and G, as import to Parcel C of the Boeing Realty Corporation's (BRC's) Former C-6 Facility in Los Angeles, California (subject parcel).

OVERVIEW/PURPOSE

Two sources of soil, totaling up to approximately 9,000 cubic yards, have been identified as potential import soil for use on Parcel C. Kennedy Jenks Consultants (K/J) collected a soil sample from each of these sources and tested these samples in accordance with the protocol presented in the December 11, 2000 Import Soil Screening Program Plan prepared for Parcel C. This plan has been used as guidance to evaluate import soil from "offsite" sources. The criteria presented in the plan were then compared to the analytical results of the soil samples. The purpose of this technical memorandum is to present a summary of the import soil evaluation of the Sources F and G soils and to provide recommendations for use as import for Parcel C.

LOCATION OF PROPOSED SOURCES F AND G IMPORT SOIL

The Source F potential import soil comprises between 4,000 and 5,000 cubic yards. Source F soil originated from a property situated at 166th and Falda in Torrance, California. It is understood through conversations with Mr. Scott Tredick of Viking Equipment Company that the Source F property has historically been developed for residential use and is currently being redeveloped for residential purposes.

The Source G potential import soil comprises approximately 4,000 cubic yards. Source G soil originated from residential property situated on Ocean Boulevard between the Pacific Coast Highway and Lomita in Torrance, California. The soil was excavated to allow for the construction of a sidewalk along Ocean Boulevard.

COMPARISON OF ANALYTICAL RESULTS TO IMPORT SOIL GUIDANCE CRITERIA

The laboratory report for the soil samples collected from the subject potential import soils is presented as Attachment 1. Each sample was tested for metals, and various organic chemicals, including total petroleum hydrocarbons, polynuclear aromatic hydrocarbons, and volatile organic hydrocarbons. A review of the laboratory results indicates that the organic chemical results are within the import soil evaluation criteria presented in the December 11, 2000 Import Soil Screening Program Plan. A summary of the detected organic compounds and their associated soil import criteria are presented in Table 1. The remaining organic compounds analyzed for were not detected, and their detection limits are within the soil import criteria.

Table 1. Summary of Detected Organic Results and Associated Import Soil Criteria

Sample Identification	Chemical	Reported Concentration (mg/kg)	Import Soil Criterion (mg/kg)
SOURCE F_02_14_01_1	Total petroleum hydrocarbons (C18-C40+)	25	< 10 – 5,000
SOURCE G_02_14_01_1	Total petroleum hydrocarbons (C24-C31)	310	< 10 – 5,000

	Benzo(a)pyrene	0.036	< 0.004 – 1.14
	Benzo(b)fluoranthene	0.035	< 0.004 – 11.4
	Fluoranthene	0.020	< 0.020 – 6,970

Several of the metals results are greater than the criteria, but are within the reported southern California background literature values. A summary of these metals results is presented in Table 2. The remaining metals analyzed for are within the import soil criteria.

	Zinc	80.2	64	10.3 – 247

RECOMMENDATIONS FOR USE AS IMPORT SOIL

It is recommended that the subject approximately 9,000 cubic yards of soil comprising Sources F and G be used as fill soil on Parcel C. Even though various metals results did not meet the soil import guidance criteria, the reported soil concentrations are within the southern California background literature values. These background values are considered to be representative of the general geographic region from which the Sources F and G import soils originated, and are not considered to be a result of chemical contamination.

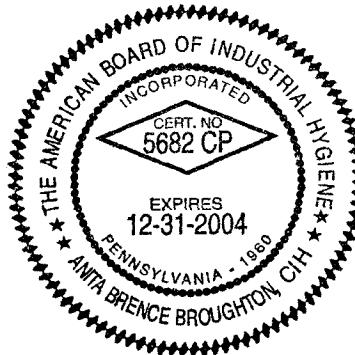

Sincerely yours,
HALEY & ALDRICH, INC.
